

Banja Luka, District 1910

DISTRIKT GRANT - COVID - 19

Rotary Club:	BANJA LUKA GLORIA
Project Leader:	Zeljka Krkoska
Point of activity:	Primary schools in Banja Luka

Project name/ description: Hand Hygiene against Disease!

Description:

Purchase and installation of wall dispensers and hand disinfectants for primary schools in Banja Luka, as well as educating pupils on the importance of proper and regular hand washing and disinfection.

The main goal of the project is to provide the conditions for pupils and school staff to be able to disinfect hands regularly, and to educate pupils about the importance of proper washing and disinfection of hands, after they return to their classrooms.

We can achieve this goal by purchasing and installing wall dispensers in all primary schools in Banja Luka, and by purchasing and delivering hand disinfectants. Also, as part of the project, the teaching staff of each school would organise a workshops on the importance of regular hand disinfection and maintaining hygiene in general. Next to each wall dispenser, we would place poster that would instruct students on the importance of hand disinfection, with certain messages in order to motivate them to disinfect their hands regularly.

The project should include all primary schools in Banja Luka (17 schools) as follows: OS P.P. Njegos, OS Sveti Sava, OS Aleksa Santic, OS Borisav Stankovic, OS Milos Crnjanski, OS Branko Radicevic, OS Branko Copic, OS V.S. Karadzic, OS G.S. Rakovski, OS Dositej Obradovic, OS J.J. Zmaj, OS Ivo Andric, OS I.G. Kovacic, OS Jovan Cvijic, OS Nikola Tesla, Centar Zastiti me/Educational institution for children with intellectual disabilities and special needs, Centar za rehabilitaciju slusanja i govora/ Rehabilitation center for children with hearing and speech disabilities.

We would install an average of 5 dispensers in each school, and deliver disinfectants. The number of dispensers installed per school would depend on the number of pupils in that school and the layout of the school building.

Products information:

1. **The wall dispensers Ecolab Dermados™** are suitable for use with all regularly available bottles for dispensers and for safe and economic application of disinfectant or cleaning solutions. The exchangeable pump can easily be pushed by handm forearm or elbow, for about 20 seconds. Mounting of the wall dispensers is possible on all surfaces. Dispensers are made of resistant, easily cleanable ABS-plastic. They can be wiped with liquid disinfectants or cleaners. The material is corrosion-resistant.
2. **Hand disinfectant Skinman™ Soft Protect** has been developed with full virucidal efficacy and is proven to improve skin tolerability and acceptability, providing an all-in-one solution for hand disinfection throughout the hospital. It is efficacious against a wide range of bacteria and viruses, including Norovirus in 15 seconds and fully virucidal in only 30 seconds. Skinman™ Soft Protect is formulated with a unique combination of immediate and long-lasting protection for the skin, helping to keep hands soft and healthy, even when used very frequently.

Sustainability:

The project is self-sustaining, the use of the dispenser can continue after the current situation with COVID - 19.

The supplier is a local company where schools will be able to buy disinfectants in the future, and the installed dispensers would remain the property of the school. We would sign a donation protocol with each school. The project can proceed independently.

Type of activity:

Water and sanitation, Primary schools support and development in the field of hygiene, Education.
